SNAPCLAIM · ONBOARDING FAQ · META GLOBAL AI DEVELOPER HACKATHON

Your Questions, Answered — Tariq

Confirmed facts about the team, repo, demo, and commitment. Anything still open is marked **TBD**.

> **Hi Tariq —** this doc is addressed to you. Here's where SnapClaim stands and where you'd fit in as a generalist.

1 Who's on the team right now?

PERSON	ROLE	COVERS / AVAILABILITY
Parithosh Varma (founder)	Team lead	Product spec, implementation plan, measurement engine, Meta model integration · ~4 hrs/day, evenings IST
You (Tariq) · github.com/galaxygamingfr	Generalist	CS major @ SFU · ready to work as many hours as needed · unavailable 4am–12pm Mon/Wed/Fri
Constantine	Generalist	~3 hrs/day, evenings UTC+3

2 Is there a repo yet, and what already works?

- **Yes — public repo:** github.com/Parithosh-Varma/snapclaim
- **Day 1 core shipped:** deterministic measurement engine (masks → area % → calibrated crack length → severity bands), receipt ledger with deterministic IDs, evidence gate that throws instead of shipping a number a receipt can't back.
- **24/24 tests pass,** `tsc --noEmit` **clean, $0 API spend.** Mock-mode pipeline runs offline against fixture data.
- **Not yet live:** real model calls (SAM 3.1 / Muse Spark / Spark Open / voice transcribe), PWA capture UI, SVG/PDF renderer, real damage photos.

3 What does the final demo look like, and which track?

Demo arc (3 minutes): real crack on a real wall → phone photo → SAM 3.1 masks bloom → one voice line → annexure writes itself with green receipts → one finding flips **DISPUTED** (skeptic can't reproduce it) → human corrects → green, co-signed → receipts page + replay.

Track: Meta Global AI Developer Hackathon, **Indie track** (main submission), Oct 26 – Nov 4, 2026. Deadline Nov 4, 9:00 PM ET = Nov 5, 7:30 AM IST; submit Nov 4 evening IST. Feature freeze Nov 2.

TypeScript · Browser PWA · SAM 3.1 · Muse Spark · Open weights · 8-day sprint

4 Hours per day until Nov 4?

- **Parithosh:** ~4 hrs/day, evenings IST
- **You (Tariq):** as many hours as needed · unavailable 4am–12pm Mon/Wed/Fri
- **Constantine:** ~3 hrs/day, evenings UTC+3

5 Would I own the eval pieces end-to-end?

> **Assigned: Constantine** owns eval end-to-end (gap benchmark, held-out split, scoring Spark Open's DISPUTED calls). As a generalist, you can support or take other areas as needed.

How we'd work together

- **Trial first:** a 20-minute call + one small PR or issue before we commit to the team.
- **Prize split:** **to be discussed and agreed in writing before submission.**
- **Credits:** claimed individually via official forms — no pooling, no account sharing.
- **Code is public from Day 1;** build logs honest and dated in `DEV-LOG.md`.

Next: tell me **what you'd want to own** and **one thing you've shipped**. First reply gets the plan PDF and a call slot.
